

5. (a) A smooth sphere P, of mass $3m$, moving with speed u , collides directly with a smooth sphere Q, of mass $5m$, which is at rest. The coefficient of restitution for the collision is e .

Find

- (i) the speed, in terms of u and e , of each sphere after the collision
- (ii) the condition to be satisfied by e in order that the spheres move in opposite directions after the collision.

(i) PCM

$$3m(u) + 5m(0) = 3mv_1 + 5mv_2 \quad (1)$$

$$v_1 - v_2 = -e(u - 0) \quad (2)$$

$$v_1 = \frac{u}{8}(3 - 5e)$$

$$v_2 = \frac{3u}{8}(1 + e)$$

If spheres are to move in opposite directions then P moves left $\Rightarrow v_1 < 0$ & Q right $\Rightarrow v_2 > 0$,
But $v_2 > 0$ since $e > 0$.

$$\Rightarrow v_1 < 0$$

$$\frac{u}{8}(3 - 5e) < 0 \quad (\times \frac{8}{u})$$

$$\Rightarrow 3 - 5e < 0$$

$$\Rightarrow \frac{3}{5} < e$$

Handwritten notes:

① $\Rightarrow m \Rightarrow 3u = 3v_1 + 5v_2$ (NEL)

② $\times 5 \Rightarrow -5eu = 5v_1 - 5v_2$

$u(3 - 5e) = 8v_1$

$\frac{u}{8}(3 - 5e) = v_1$

Sub into ②

$\frac{5u}{8}(3 - 5e) = -eu + v_2$

$\frac{3u}{8} - \frac{5eu}{8} + \frac{8eu}{8} = v_2$

$\frac{3u + 3eu}{8} = v_2$ (ii)

$\frac{3u(1+e)}{8} = v_2$
