---

**LEAVING CERTIFICATE EXAMINATION, 2009**

---

**APPLIED MATHEMATICS – ORDINARY LEVEL**

---

**FRIDAY, 19 JUNE – MORNING, 9:30 to 12:00**

---

Six questions to be answered. All questions carry equal marks.

Mathematics Tables may be obtained from the Superintendent.

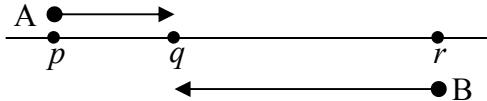

Take the value of  $g$  to be  $10 \text{ m/s}^2$ .

$\vec{i}$  and  $\vec{j}$  are unit perpendicular vectors in the horizontal and vertical directions, respectively, or eastwards and northwards, respectively, as appropriate to the question.

**Marks may be lost if necessary work is not clearly shown.**

---

1. 3 points  $p$ ,  $q$  and  $r$  lie on a straight level road.

Two cars, A and B, are moving towards each other on the road.

Car A passes  $p$  with speed 3 m/s and uniform acceleration of  $2 \text{ m/s}^2$  and at the same instant car B passes  $r$  with speed 5 m/s and uniform acceleration of  $4 \text{ m/s}^2$ .

A and B pass each other at  $q$  seven seconds later.

Find (i) the speed of car A and the speed of car B at  $q$ .

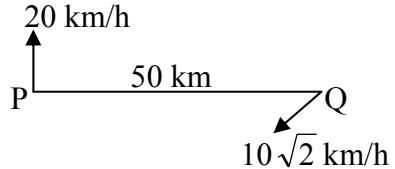

(ii)  $|pq|$  and  $|rq|$ , the distances A and B have moved in these 7 s.

Car A stops accelerating at  $q$  and continues on to  $r$  at uniform speed.

(iii) Find, correct to one place of decimals, the total time for car A to travel from  $p$  to  $r$ .

2. A ship P is moving north at a constant speed of 20 km/h.

Another ship Q is moving south-west at a constant speed of  $10\sqrt{2}$  km/h.

At a certain instant, P is positioned 50 km due west of Q.

Find (i) the velocity of P in terms of  $\vec{i}$  and  $\vec{j}$

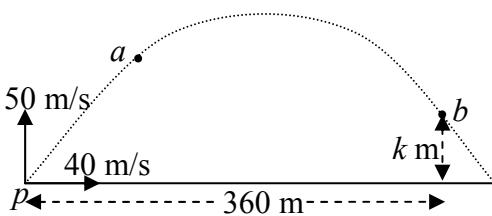

(ii) the velocity of Q in terms of  $\vec{i}$  and  $\vec{j}$

(iii) the velocity of P relative to Q in terms of  $\vec{i}$  and  $\vec{j}$

(iv) the shortest distance between P and Q in the subsequent motion.

3. (a) A particle is projected with initial velocity  $40 \vec{i} + 50 \vec{j}$  m/s from point  $p$  on a horizontal plane.

$a$  and  $b$  are two points on the trajectory (path) of the particle.

The particle reaches point  $a$  after 2 seconds of motion.

The displacement of point  $b$  from  $p$  is  $360 \vec{i} + k \vec{j}$  metres.

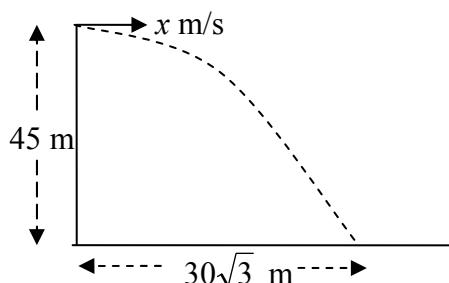

- Find (i) the velocity of the particle at  $a$  in terms of  $\vec{i}$  and  $\vec{j}$   
(ii) the speed and direction of the particle at  $a$   
(iii) the value of  $k$ .

- (b) A straight vertical cliff is 45 m high.

A projectile is fired horizontally with an initial speed of  $x$  m/s from the top of the cliff.

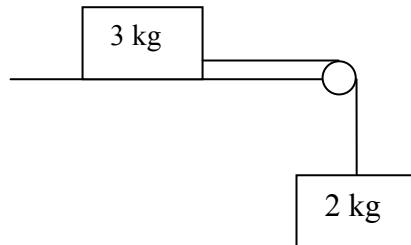

It strikes the level ground at a distance of  $30\sqrt{3}$  m from the foot of the cliff.

Find the value of  $x$ , correct to one decimal place.

4. (a) Two particles of masses 3 kg and 2 kg are connected by a taut, light, inextensible string which passes over a smooth light pulley at the edge of a smooth horizontal table. The system is released from rest.

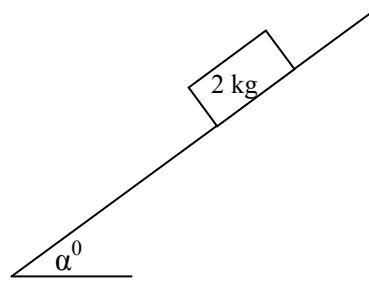

- (i) Show on separate diagrams the forces acting on each particle.  
(ii) Find the common acceleration of the particles.  
(iii) Find the tension in the string.

- (b) A particle of mass 2 kg is released from rest and slides down a rough plane which is inclined at an angle  $\alpha^0$  to the horizontal,

$$\text{where } \tan \alpha = \frac{4}{3}.$$

The coefficient of friction between the particle and the plane is  $\frac{1}{2}$ .

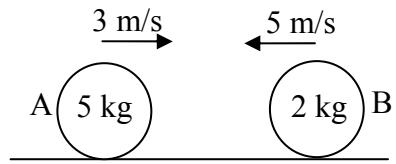

- (i) Show on a diagram the forces acting on the particle.  
(ii) Find the acceleration of the particle.

5. A smooth sphere A, of mass 5 kg, collides directly with another smooth sphere B, of mass 2 kg, on a smooth horizontal table.

Before impact A and B are moving in opposite directions with speeds 3 m/s and 5 m/s, respectively.

The coefficient of restitution for the collision is  $\frac{3}{4}$ .

- Find (i) the speed of A and the speed of B after the collision  
(ii) the loss in kinetic energy due to the collision  
(iii) the magnitude of the impulse imparted to B due to the collision.

6. (a) Particles of weight 4 N, 5 N, 3 N and 2 N are placed at the points  $(11, 5)$ ,  $(p, q)$ ,  $(-4, 1)$  and  $(7, p)$ , respectively.

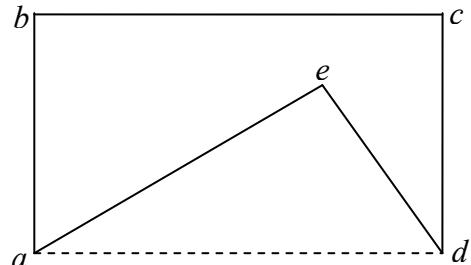

The co-ordinates of the centre of gravity of the system are  $(4, q)$ .

- Find (i) the value of  $p$   
(ii) the value of  $q$ .

- (b) A rectangular lamina with vertices  $a$ ,  $b$ ,  $c$  and  $d$  has the triangular portion with vertices  $a$ ,  $d$  and  $e$  removed.

The co-ordinates of the points are  $a(0, 0)$ ,  $b(0, 8)$ ,  $c(12, 8)$ ,  $d(12, 0)$  and  $e(9, 6)$ .

Find the co-ordinates of the centre of gravity of the remaining lamina.

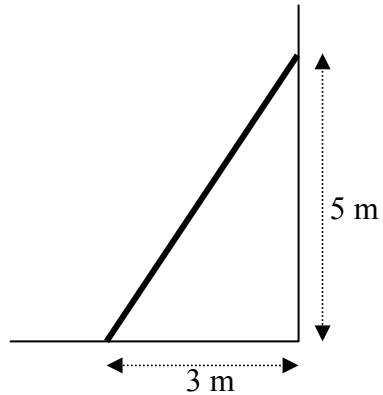

7. (a) A uniform ladder, of weight 200 N, rests on rough horizontal ground and leans against a smooth vertical wall.

The foot of the ladder is 3 m from the wall and the top of the ladder is 5 m above the ground.

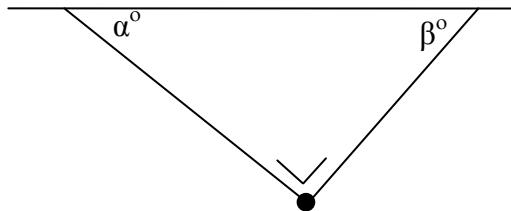

The ladder is in equilibrium and is on the point of slipping.

Find the coefficient of friction between the ladder and the ground.

- (b) Two light inextensible strings are tied to a particle weighing 50 N.

The other ends of the strings are tied to two points on a horizontal ceiling.

The strings make angles  $\alpha^\circ$  and  $\beta^\circ$  with the ceiling, as shown in the diagram.

$$\tan \alpha = \frac{4}{3} \text{ and } \tan \beta = \frac{3}{4}$$

- (i) Show on a diagram the forces acting on the particle.
- (ii) Write down the two equations that arise from resolving the forces horizontally and vertically.
- (iii) Solve these equations to find the tension in each of the strings.

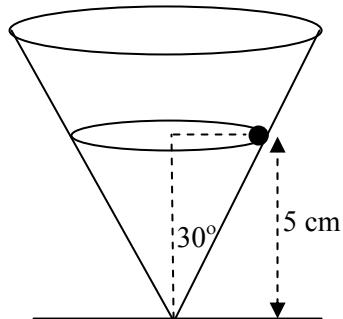

8. (a) A particle describes a horizontal circle of radius 0.5 m with uniform angular velocity  $\omega$  radians per second.  
Its acceleration is  $8 \text{ m/s}^2$ .

Find (i) the value of  $\omega$   
(ii) the time taken to complete one revolution.

- (b) A right circular hollow cone is fixed to a horizontal surface.  
Its semi-vertical angle is  $30^\circ$  and its axis is vertical.

A smooth particle of mass 2 kg describes a horizontal circle of radius  $r$  cm on the smooth inside surface of the cone.

The plane of the circular motion is 5 cm above the horizontal surface.

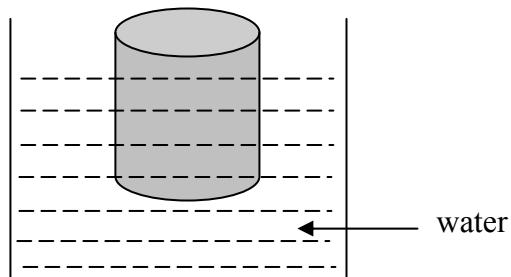

- (i) Find the value of  $r$  in surd form.
- (ii) Show on a diagram all the forces acting on the particle.
- (iii) Find the reaction force between the particle and the surface of the cone.
- (iv) Calculate the angular velocity of the particle.

9. (a) A right circular solid cylinder floats at rest in water with its axis vertical.

The radius of the cylinder is 6 cm and its height is 20 cm.

75% of the cylinder lies below the surface of the water.

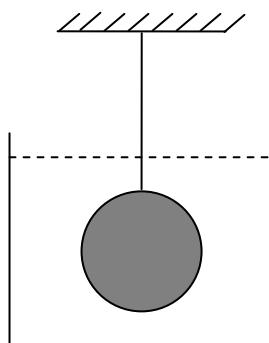

Find the weight of the cylinder.

- (b) A solid sphere of radius 7 cm and relative density 3 is completely immersed in a liquid of relative density 0.8.

The sphere is held at rest by a light inelastic vertical string which is tied to a fixed support.

Find the tension in the string.

[ Density of water =  $1000 \text{ kg/m}^3$  ].
